Summary

As an Associate Product Designer at BetterPlace, I create impactful and user-friendly mobile interfaces for Skilling and Attendance products, which aim to improve the lives of the frontline workforce. I have a BSc in Computer Science from Osmania University and a UX Design certification from Growth School, where I acquired skills in user research, wireframing, prototyping, and testing.

I use Figma as my main design tool and work closely with developers, product managers, and other designers to deliver high-quality products. I am passionate about solving real-world problems for the underserved and marginalized segments of society, and I believe that design can make a positive difference in their lives. I am eager to learn from and contribute to a diverse and inclusive team that values innovation, empathy, and excellence.

Experience

Associate Product Designer
